PUBLIC HEALTH ADVOCATE | PHARMACIST |
COMMUNITY HEALTH LEADER | HEALTH
RESEARCHER

I lead evidence-based public health initiatives that address critical healthcare challenges through policy influencing, community health education, and disease prevention to improve health and wellbeing.

See Services

About Me:

I am a pharmacist and public health professional with experience spanning clinical pharmacy practice, public health programmes, infectious disease research, health awareness campaigns, project management, supply chain systems, and data-driven health interventions. My work sits at the intersection of community health and health systems, where I focus on translating evidence into practical solutions that improve health outcomes.

I am driven by the urgent need to reduce preventable deaths from infectious and other life-threatening diseases, particularly in communities where health education is limited and access to care remains a challenge. Witnessing the impact of weak health systems, low awareness of deadly diseases, and gaps in preventive healthcare continues to shape my commitment to public health leadership.

Public Health Impacts & Professional Services

Health Education & Awareness

Community Outreach

Healthcare System Reforming

RABIES AWARENESS CAMPAIGN (Founder & Lead Organizer)

The Problem:

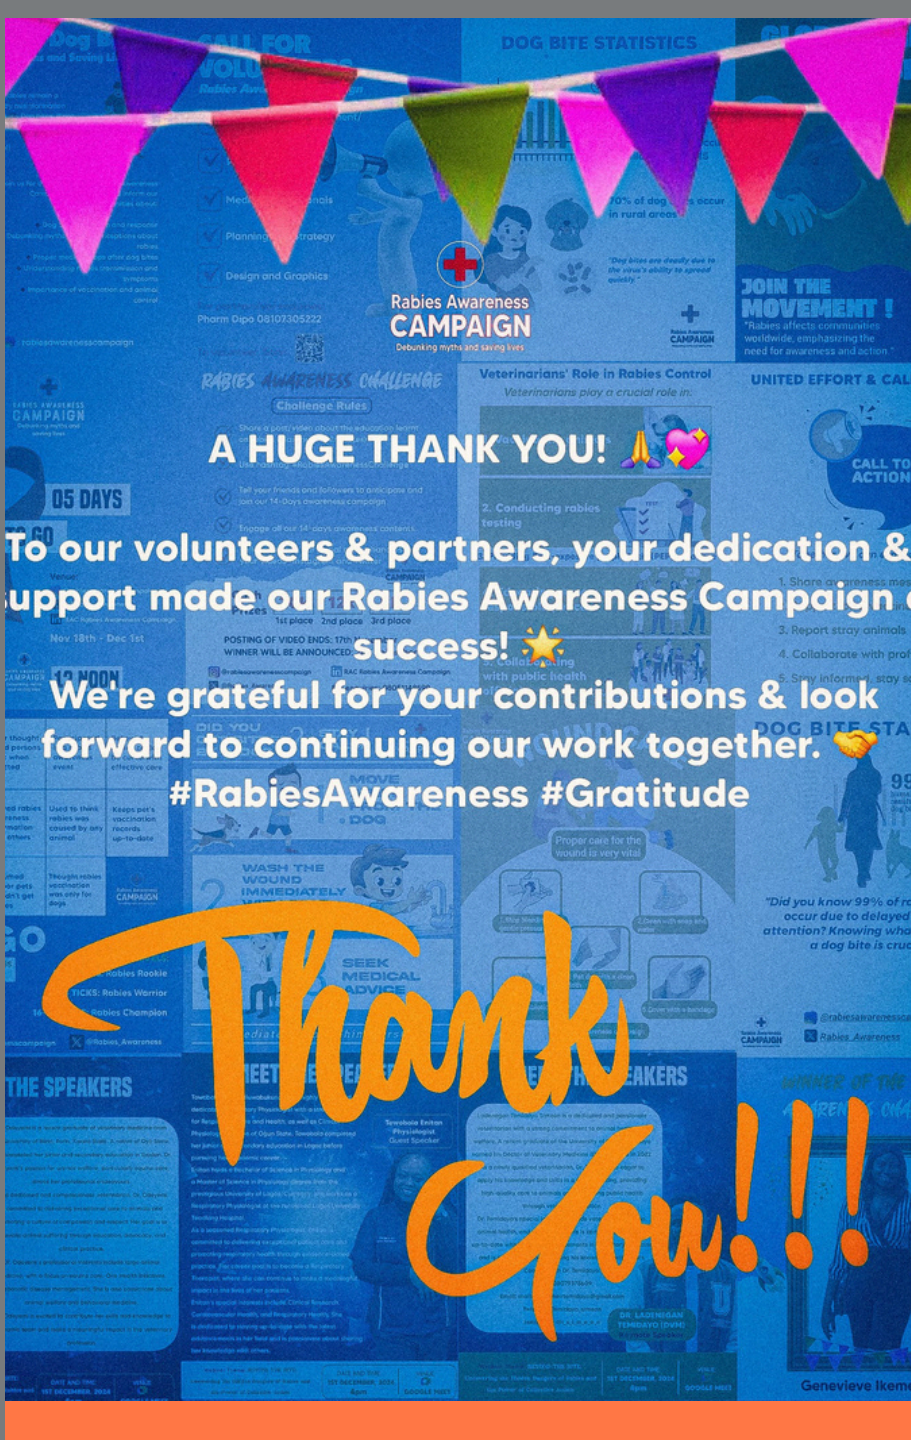

I witnessed children die due to lack awareness of the deadline of rabies virus by their parent and care givers, a nearly 100% fatal disease after transmission, especially among children aged 5–14. Communities lacked knowledge of prevention, post-exposure measures, and pet education.

What I Did:

Founded and led a 14-day campaign with 200+ volunteers across 5 teams. Leveraged social media (Twitter/X, Instagram, TikTok) using videos and infographics, partnering with student and health organizations to maximize global reach.

Impact:

- Educated 8,000+ people worldwide
- Managed a cross-functional volunteer team of 200+
- Raised awareness on disease prevention and community health practices

LOT QUALITY ASSURANCE SAMPLING (Polio Virus Outbreak Response-2) — WHO

The Problem:

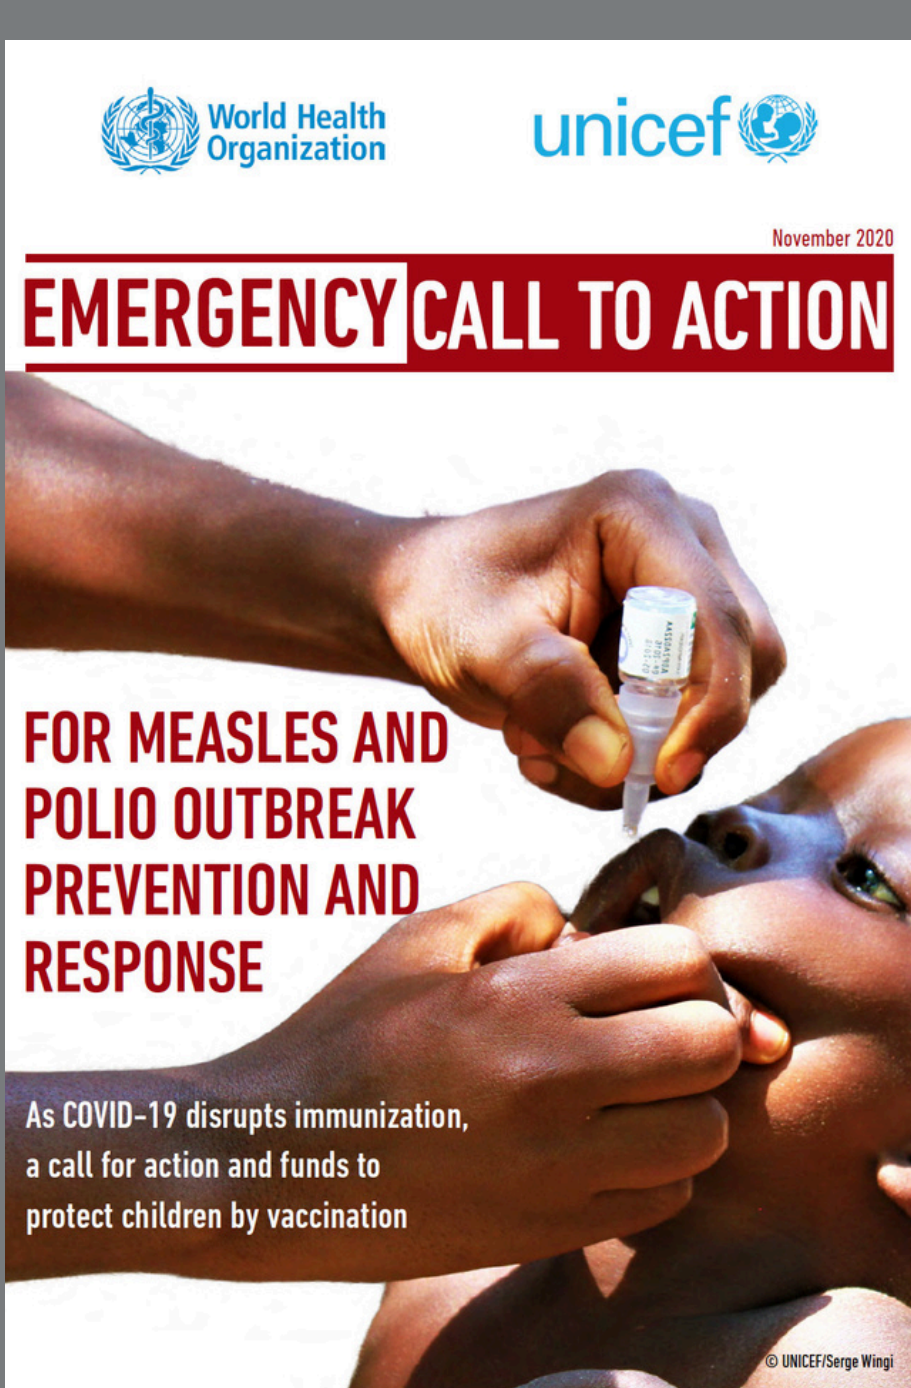

Low vaccination coverage among children aged 0–59 months, including households rejecting the polio vaccine, risking transmission of the virus in high-risk communities.

What I Did:

Led data collection using the Lot Quality Assurance Sampling method across six wards in Badagry. Recorded vaccination status of children, tracked households rejecting vaccines, and captured geo-coordinates for settlements before and after sampling. Analyzed community vaccination data using the ODK tool to evaluate coverage and identify gaps.

Impact:

- Provided accurate, actionable data to inform vaccination strategies in high-risk areas
- Contributed to improving polio outbreak response planning and monitoring
- Strengthened collaboration between community stakeholders and WHO field teams

RESEARCH & VOLUNTEERING

- (2024): Evaluation and analysis of consumption rate of anti-rabies vaccine in collaboration with Bola Tinubu PHC. (Ongoing)
- Impact Healthcare Leaders Network (IHLN): Active member contributing to healthcare leadership development.
- Volunteered for health outreach at Kirikiri maximum security prison and in other reputable organizations.

CERTIFICATIONS

- Licensed Pharmacist
- Project Management in Global Health
- WHO / LQAS Polio Outbreak Response Surveillance
- Data Analysis, Data Collection & ODK Tool Use
- Supply Chain Management
- Agile Project Management : Scrum and Kanban
